--	-------------------	--------	--------	--

II. Accounting period and currency used in accounting

01. The Company's fiscal year begins on January 1 and ends on December 31 of each calendar year. For this accounting period, the Company prepares the Separate Financial Statements for the period from January 1, 2025, to June 30, 2025

02. The currency used in accounting records is the Vietnamese Dong (VND).

III. Accounting standards and system

01. Accounting System

The company applies the Enterprise Accounting System issued under Circular No. 200/2014/TT-BTC dated December 22, 2014, by the Ministry of Finance, guiding the Enterprise Accounting System; Circular No. 53/2016/TT-BTC dated March 21, 2016, by the Ministry of Finance on amendments and supplements to some articles of Circular No. 200/2014/TT-BTC; and Circular No. 75/2015/TT-BTC dated May 18, 2015, by the Ministry of Finance on amendments and supplements to Article 128 of Circular No. 200/2014/TT-BTC.

02. Statement of the compliance with the Accounting Standards and System

The Company has applied the Vietnamese Accounting Standards and related guidance documents issued by the State. The Financial Statements are prepared and presented in full compliance with the provisions of each standard, circulars guiding the implementation of the standards, and the current Enterprise Accounting Regime in effect.

IV. Accounting policies

01. Exchange rates applied in accounting

The company conducts transactions in foreign currency and records them in the accounting books and prepares financial statements in a consistent currency unit, which is the Vietnamese Dong. The conversion of foreign currency to Vietnamese Dong is based on:

- The actual transaction exchange rate;
- The exchange rate recorded in the accounting books.

02. Principle of determining the real interest rate used to discount cash flows

Real interest rate (effective interest rate) is determined as follows:

- It is the commercial bank lending interest rate commonly applied in the market at the time of the transaction;
- In case the commercial bank lending interest rate mentioned above cannot be determined, the actual interest rate is the interest rate at which the Company can borrow in the form of issuing debt instruments without the right to convert into shares (such as issuing ordinary bonds without the right to convert or borrowing by normal contracts) under normal production and business conditions.

03. Principles for Determining Cash and Cash Equivalents

Cash and Cash Equivalents include cash on hand, bank deposits, and short-term investments with maturities of no more than three months. These assets must be highly liquid, easily convertible into specific amounts of cash, and subject to insignificant risk of changes in value upon conversion to cash.

Amounts deposited by other enterprises and individuals as deposits or escrow with the Company are managed and accounted for as the Company's cash.

When foreign currency transactions occur, the foreign currency is converted into Vietnamese Dong based on the following principles: Debit side of cash accounts: The actual transaction exchange rate is applied; Credit side of cash accounts: The weighted average exchange rate.

At the time of preparing the Financial Statements as required by law, foreign currency balances are revalued at the actual transaction exchange rate, which is the buying exchange rate of the commercial bank where the Company frequently transacts at the time of preparing the Financial Statements.

04. Principles for Recognizing Investments

a. Held-to-maturity investments

Held-to-maturity investments include term deposits and bonds for the purpose of receiving periodical interest.

For held-to-maturity investments, if no provision for doubtful debts has been made as required by law, the accountant evaluates the recoverability of the investments. If there is conclusive evidence that part or all of the investment may not be recoverable, the accountant records the loss as a financial expense for the period. If the loss cannot be reliably determined, the accountant explains the recoverability of the investment in the Financial Statements.

b. Investment in subsidiaries

Investments in subsidiaries where the Company holds control are presented using the cost method. The profit distribution that the parent company receives from the cumulative profits of its subsidiaries after the parent

company gains control is recorded in the business results for the year of the parent company. Other distributions are considered as a recovery of investments and are deducted from the investment value.

A provision for investment devaluation is established at the end of the year. The provision amount is determined based on the financial statements at the time the provision is made by the economic organization.

c. Investments in equity instruments of other entities

Investments in equity instruments of other entities are initially recognized at costs.

Provision for Investment Devaluation is established at the end of the year as the difference between the original cost recorded in the accounting books and the market value at the time of provision, if the former is greater. Alternatively, the provision amount is determined based on the financial statements of the economic organization at the time of provision when the market value cannot be determined.

05. Principles for Recognizing Receivables

Việc The classification of receivables as trade receivables and other receivables is made according to the following principles:

a. Trade receivables reflect receivables concerning the commercial nature arising from purchase and sale transactions such as: Receivables from sales of goods, provision of services, liquidation, and transfer of assets (fixed assets, investment properties, financial investments) between the Company and buyers (independent entities separate from the seller, including receivables between the parent company and subsidiaries, joint ventures, and associates). These receivables also include amounts receivable from the sale of exported goods by the principal through the trustee.

b. Other receivables reflect receivables not concerning the commercial nature and irrelevant to purchase and sale transactions such as :

- Receivables generating financial revenue such as loan interest, deposits, dividends, and profit sharing;
- Amounts advanced on behalf of a third party that are entitled to reimbursement; amounts the export trustee must collect on behalf of the consignor;
- Non-commercial receivables such as asset lending, receivables for fines, compensation, and pending asset shortages ...

When preparing the Financial Statements, the accountant classifies receivables as long-term or short-term based on their remaining maturity. The receivables line items in the Balance Sheet may include amounts reflected in accounts other than receivable accounts such as: loans recorded in account 1283; deposits and collaterals recorded in account 244; and advances recorded in account 141... Receivables denominated in foreign currencies are revalued at the end of the period when preparing the Separate Financial Statements. The actual transaction exchange rate used for revaluing foreign currency receivables at the time of preparing the Financial Statements is

the exchange rate published by the commercial bank where the Company frequently transacts (selected by the Company for transactions with the receivable party).

The provision for doubtful debts is determined based on items classified as short-term and long-term receivables in the Balance Sheet. Each doubtful debt is provided for based on its age or the expected loss that may occur.

06. Principles for Recognizing Inventories

a. Principles for Recognizing Inventories

The Company's inventories are assets purchased for production or sale during the normal course of business. For work-in-progress products, if the production or circulation time exceeds a normal business cycle, they are not presented as inventories on the Balance Sheet but are instead classified as long-term assets. Products, goods, materials, assets kept on deposit, consigned for import and export, processed... that are not owned and controlled by the Company are not reflected as inventory.

Inventories are measured at cost. If the net realizable value is lower than the cost, inventories are measured at net realizable value. The cost of inventories includes purchase costs, processing costs and other directly related costs incurred to bring the inventories to their current location and condition.

b. Methods for inventory valuation

Inventory value is determined using the weighted average method.

The method for determining the value of work-in-progress products: Costs of unfinished production are accumulated based on the actual costs incurred for each production stage in the process.

c. Inventory accounting method

Inventories are accounted for using the perpetual inventory method.

d. Method for making provisions for inventory devaluation

The provision for inventory devaluation is made at the end of the year and is calculated as the difference between the cost of inventory and its net realizable value, if the cost is higher.

07. Fixed assets and depreciation of fixed assets

Tangible fixed assets and intangible fixed assets are recognized at cost. During their use, tangible fixed assets and intangible fixed assets are recorded at historical cost, accumulated depreciation, and net book value. Depreciation is calculated using the straight-line method. The estimated depreciation periods are as follows:

Buildings and structures	05 - 50 years
Machinery and equipment	05 - 20 years
Motor vehicles	06 - 30 years

Office equipment	03 - 08 years
Software	03 - 08 years

Depreciation of fixed assets for rubber plantations is carried out in accordance with Official Dispatch No. 1937/BTC-TCDN dated February 9, 2010, issued by the Corporate Finance Department - Ministry of Finance regarding depreciation of rubber plantations, and Decision No. 221/QĐ-CSVN dated April 27, 2010, issued by the Vietnam Rubber Group regarding the issuance of depreciation rates for rubber plantations based on a 20-year exploitation cycle; specifically as follows:

<i>Year of Exploitation</i>	<i>Depreciation Rate (%)</i>
- Year 1	2.50
- Year 2	2.80
- Year 3	3.50
- Year 4	4.40
- Year 5	4.80
- Year 6	5.40
- Year 7	5.40
- Year 8	5.10
- Year 9	5.10
- Year 10	5.00
- Year 11	7.00
- Year 12	6.60
- Year 13	6.20
- Year 14	5.90
- Year 15	5.50
- Year 16	5.40
- Year 17	5.00
- Year 18	5.00
- Year 19	5.20

The annual depreciation amount is determined by multiplying the historical cost of the rubber plantation by the depreciation rate applicable for that year.

The depreciation for the final year (Year 20) is determined based on the residual value of the plantation in the last year of exploitation.

08. Principles for Recognizing Construction-in-Progress Costs

Collecting and tracking costs incurred in basic construction investment projects (including costs for acquiring new fixed assets, new construction, repair, renovation, expansion, or technical upgrades of works) and monitoring the settlement of construction projects.

Construction-in-progress costs are tracked in detail for each project, work item, and specific cost category.

09. Principles for recognizing and allocating prepaid expenses.

Prepaid expenses that are only related to the business performance of one fiscal year or business cycle are recorded as short-term prepaid expenses and are allocated to the business performance of that fiscal year. Prepaid expenses that arise in a fiscal year but are related to the business performance of many accounting periods are recorded as long-term prepaid expenses and are gradually allocated to the business performance of the following accounting periods.

The calculation and allocation of long-term prepaid expenses to production and business expenses for each accounting period are based on the nature and extent of each type of expense to select an appropriate method and allocation basis. Prepaid expenses are gradually allocated to production and business expenses using the straight-line method.

10. Principles for recognizing liabilities

Accounts payable to the seller are classified according to the following principles:

- a. Trade payables include amounts payable of a commercial nature arising from transactions involving the purchase of goods, services, or assets, and are owed to sellers (independent entities separate from the buyer, including payables between the parent company and subsidiaries, joint ventures, and associates). These payables also include amounts payable for imports made through an entrusted party (in consignment import transactions);
- b. Other payables include non-commercial payables that are not related to transactions involving the purchase, sale, or provision of goods and services:
 - Payables related to financial expenses, such as interest payable, dividends and profits payable, and payables for financial investment activities;
 - Payables arising from advances made by third parties; amounts received by the trustee from related parties for payment as designated in entrusted import-export transactions;
 - Non-commercial payables such as payables arising from borrowing assets, fines, compensation, surplus assets pending resolution, and payables related to social insurance, health insurance, unemployment insurance, and trade union fees, ...

When preparing the Financial Statements, the accountant classifies payables as long-term or short-term based on their remaining maturity. If evidence indicates that a loss is likely to occur, the accountant immediately recognizes a payable in accordance with the prudence principle.

Payables denominated in foreign currencies are revalued at the end of the period when preparing the Financial Statements. The actual transaction exchange rate used for revaluing foreign currency payables at the time of preparing the Financial Statements is the exchange rate published by the commercial bank where the Company frequently transacts (selected by the Company for transactions with the payable party).

11. Principles for recognizing borrowings

Borrowings with repayment terms exceeding 12 months from the date of the Financial Statements are presented as long-term borrowings and finance leases. Borrowings due within the next 12 months from the date of the Financial Statements are presented as short-term borrowings and finance leases to facilitate repayment planning.

Borrowing costs directly related to the loan (excluding interest payable), such as appraisal fees, audit fees, and loan application preparation costs, are recorded as financial expenses. If these costs arise from consolidated loans used for the purpose of investing in, constructing, or producing work-in-progress assets, they are capitalized.

When preparing the Financial Statements, the balances of borrowings denominated in foreign currencies are revalued at the actual exchange rate at the time of preparing the Financial Statements. Exchange rate differences arising from the settlement and end-of-period revaluation of foreign currency borrowings are recorded as financial income or financial expenses.

12. Principles for recognizing and capitalizing borrowing costs

Borrowing costs are recognized as production and business expenses for the period when incurred, except for borrowing costs directly related to the investment in construction or production of work-in-progress assets, which are capitalized as part of the asset's value when the conditions specified in Vietnamese Accounting Standard No. 16 "Borrowing Costs" are met.

Borrowing costs directly related to the investment in construction or production of work-in-progress assets, which require a period of more than 12 months to be put into use for their intended purpose or for sale, are capitalized as part of the asset's value. These costs include interest on loans, amortization of discounts or premiums on bond issuance, and other incidental costs related to the borrowing process.

For consolidated loans used for the construction of fixed assets and investment properties, interest on the loans is capitalized even when the construction period is less than 12 months.

13. Principles for recognizing and capitalizing borrowing costs

Payables for goods and services received from sellers or provided to buyers during the reporting period but not yet paid due to the absence of invoices or incomplete accounting documents are recognized as production and business expenses for the reporting period.

The recognition of payable expenses into production and business expenses for the period must follow the principle of matching revenue and expenses incurred during the period.

Payable expenses will be settled based on the actual costs incurred. The difference between the estimated accrual and actual expenses will be reversed.

14. Principles for Recognizing Owner's Equity

The owner's equity is recognized based on the actual capital contributed by the owner.

Capital surplus reflects the difference between the par value, direct costs related to the issuance of shares, and the issue price of the shares (including cases of reissuing treasury shares). It can result in a positive surplus (if the issue price is higher than the par value and the direct costs related to the issuance) or a negative surplus (if the issue price is lower than the par value and the direct costs related to the issuance).

Treasury stocks are shares issued by the Company and repurchased by the Company. These shares are not canceled and will be reissued within the time frame specified by securities laws. Treasury stocks are recognized at their repurchase cost and presented on the Balance Sheet as a reduction in the owner's equity. The cost of treasury stocks when reissued or used for dividends, bonuses, ..., is calculated using the weighted average method.

Undistributed profit after tax reflects the business results (profits or losses) after corporate income tax and the distribution of profits or handling of losses by the Company. Profit distribution occurs when the Company has undistributed profit after tax not exceeding the undistributed profit after tax on the consolidated financial statements, after excluding the impact of any gains recognized from bargain purchase transactions. In the case of dividend payments, profits distributed to owners exceeding the undistributed profit after tax are recognized as a reduction in capital contributions. Undistributed profit after tax may be distributed to investors based on their capital contribution ratio, after approval by the General Meeting of Shareholders/Board of Directors and after the necessary allocations to reserves in accordance with the Company's Charter and Vietnamese legal regulations.

Dividends payable to shareholders are recognized as a payable on the Company's Balance Sheet after the dividend declaration by the Board of Directors and the notification of the dividend entitlement date by the Viet Nam Securities Depository And Clearing Corporation (VSDC).

15. Principles and methods for recognizing revenue

a. Sales Revenue

Sales revenue is recognized when the following conditions are met:

- Most of the risks and benefits associated with ownership of the product or goods have been transferred to the buyer;
- The Company no longer retains control over the goods as the owner or does not have control over the goods;
- The revenue is reasonably certain;
- The Company has received or will receive economic benefits from the sale transaction;
- The costs related to the sale transaction can be determined

b. Service Revenue

Service revenue is recognized when the outcome of the transaction can be reliably determined. In cases where the provision of services spans multiple periods, revenue is recognized in the period based on the portion of the work completed as of the Balance Sheet date of that period. The outcome of the service transaction is determined when the following conditions are met:

- The revenue is reasonably certain;
- It is probable that economic benefits will be obtained from the service transaction;
- The portion of work completed as of the Balance Sheet date can be determined;
- The costs incurred for the transaction and the costs to complete the service transaction can be determined

The portion of service work completed is determined using the method of evaluating completed work.

c. Financial Revenue

Revenue arising from interest, dividends, profit sharing and other financial income is recognized when both of the following conditions are met:

- It is probable that economic benefits will be obtained from the transaction;
- The revenue is reasonably certain.

Dividends and profit sharing are recognized when the Company has the right to receive the dividend or profit from its investment.

d. Other Income

Reflects income other than that arising from the Company's main business activities, including:

- Income from the sale or disposal of fixed assets;
- Income from sale and leaseback transactions;
- Tax refunds or reductions related to the sale of goods or provision of services, such as refundable export tax, reduced VAT, special consumption tax and environmental protection tax (EPT) that were previously paid;
- Compensation received from third parties to cover losses to assets (e.g., insurance proceeds, compensation for relocating business premises, and similar payments);
- Fines collected from customers for contract violations;
- Other income not listed above.

16. Principles for accounting for cost of goods sold

Reflects the cost of goods, products, or services sold during the period.

The provision for inventory devaluation is included in the cost of goods sold based on the quantity of inventory and the difference between the net realizable value and the cost of inventory.

For the portion of inventory value that has been damaged or lost, the accountant immediately includes it in the cost of goods sold (after deducting any compensation, if applicable).

For direct material costs that exceed the normal consumption level, labor costs, and fixed production overhead costs that are not allocated to the value of inventory, the accountant immediately includes them in the cost of goods sold (after deducting any compensation, if applicable), even if the products or goods have not yet been identified as sold.

Import taxes, special consumption taxes, and environmental protection taxes that have been included in the cost of purchased goods, if refunded upon the sale of the goods, are recorded as a reduction in the cost of goods sold.

Cost of goods sold expenses that are not deductible for corporate income tax purposes according to tax law, but for which proper invoices and documentation exist and are recorded in accordance with the Company's accounting policies, are not reduced in accounting expenses but will be adjusted in the corporate income tax settlement to increase the taxable income.

17. Principles for accounting for financial expenses

Reflects financial operating expenses, including costs or losses related to financial investment activities, lending and borrowing costs, costs for joint venture and associate contributions, losses from the sale of short-term securities, transaction costs related to the sale of securities; provisions for devaluation of trading securities, provisions for investment loss in other entities, losses arising from foreign currency sales, foreign exchange losses, ...

Financial expenses that are not deductible for corporate income tax purposes under tax law, but for which proper invoices and documentation exist and have been correctly recorded in accordance with the Company's accounting policies, are not reduced in accounting expenses. Instead, they are adjusted in the corporate income tax settlement to increase the amount of corporate income tax payable.

18. Principles for accounting for selling expenses and administrative expenses

Selling expenses include actual costs incurred during the process of selling products, goods, or providing services, such as costs for offering, introducing products, advertising products, sales commissions, product warranty costs, storage, packaging, transportation costs, ...

Administrative expenses include: Salaries and wages of employees in the management department (salary, wages, allowances, ...); social insurance, health insurance, trade union funds, unemployment insurance for management personnel; office materials, labor tools, depreciation of fixed assets used for business management; land rent, business license tax; provisions for doubtful debts; outsourced services (electricity, water, telephone, fax, property insurance, fire insurance, ...); other cash expenses (hospitality, customer meetings, ...)

Selling expenses and administrative expenses that are not deductible for corporate income tax purposes under tax law, but for which proper invoices and documentation exist and have been correctly recorded in accordance with

the Company's accounting policies, are not reduced in accounting expenses. Instead, they are adjusted in the corporate income tax settlement to increase the amount of corporate income tax payable.

19. Corporate Income Tax

Current corporate income tax expense and deferred corporate income tax expense

Current corporate income tax expense is determined based on taxable income for the year and the corporate income tax rate for the current accounting year.

Deferred corporate income tax expense is determined based on deductible temporary differences, taxable temporary differences, and the corporate income tax rate.

Current corporate income tax expense is not offset against deferred corporate income tax expense.

Tax incentives and exemptions

According to Clause 4, Article 11; Article 13; and Article 14 of Circular No. 96/2015/TT-BTC dated June 22, 2015, issued by the Ministry of Finance regarding corporate income tax, the Company is eligible for a preferential corporate income tax rate of 10% on income derived from cultivation activities in economically disadvantaged areas.

This tax reduction does not apply to other income sources, which are subject to a 20% tax rate.

20. Other accounting principles and methods

a. Financial Instruments

Initial recognition

Financial Assets

The Company's financial assets include cash and cash equivalents, receivables from customers and other receivables, loans, short-term and long-term investments. At initial recognition, financial assets are measured at acquisition cost/issuance cost plus other directly attributable costs related to the acquisition/issuance of those financial assets.

Financial Liabilities

The Company's financial liabilities include borrowings, payables to suppliers and other payables, and accrued expenses. At initial recognition, financial liabilities are measured at issuance cost plus other directly attributable costs related to the issuance of those financial liabilities.

Subsequent Measurement Currently

Currently, there are no regulations on the revaluation of financial instruments after initial recognition.

b. Related Parties

Parties are considered to be related if one party has the ability to control or exercise significant influence over the other party in making decisions about financial and operating policies. The Company's related parties include:

- Enterprises that directly or indirectly, through one or more intermediaries, control, are controlled by, or are under common control with the Company, including the parent, subsidiary, and associate companies;
- Individuals who directly or indirectly hold voting power in the Company and have significant influence over the Company, key management personnel of the Company, and close family members of these individuals;
- Enterprises in which the individuals mentioned above directly or indirectly hold a significant portion of the voting power or have significant influence over the Company.

In considering each related party relationship, attention should be paid to the substance of the relationship, not just its legal form.

c. Product prices

For the main product, rubber latex: The product cost is calculated using the weighted average method on an annual basis, divided into two stages: the raw latex extraction stage and the latex processing stage into finished product.

For by-products: The direct cost accumulation method is applied.

Total			17,019,607,013	9,591,361,951

Financial assets and financial liabilities have not been measured at fair value as of the end of the reporting period because Circular No. 210/2009/TT-BTC and the current regulations require the presentation of financial statements and disclosures related to financial instruments, but do not provide equivalent guidance for assessing and recognizing the fair value of financial assets and financial liabilities, except for provisions for doubtful debts and provisions for devaluation of securities investments, which are detailed in the related disclosures.

Financial Risk Management

The Company's financial risks include market risk, credit risk, and liquidity risk. The Company has established a control system to ensure a reasonable balance between the costs of emerging risks and the costs of managing those risks. The Board of Management is responsible for monitoring the risk management process to ensure a reasonable balance between risk and risk control.

a. Credit Risk

Credit risk is the risk that one party involved in a financial instrument or contract will be unable to fulfill its obligations, resulting in financial losses for the Company. The Company faces credit risk from its business activities (mainly from receivables from customers) and financial activities (including bank deposits, loans, and other financial instruments).

Liquidity Risk

Liquidity risk is the risk that the Company faces difficulties in fulfilling its financial obligations due to a lack of funds. The Company's liquidity risk primarily arises from mismatched maturity dates between financial assets and financial liabilities. The repayment terms of financial liabilities are based on the expected payments according to contracts, without discounting, as follows:

As of January 01, 2025	1 Year or Less	More than 1 Year to 5 Years	More than 5 Years	Total

As of June 30, 2025	1 Year or Less	More than 1 Year to 5 Years	More than 5 Years	Total
Payables to suppliers, other payables	16,854,607,013	0	0	16,854,607,013
Payables expenses	165,000,000	0	0	165,000,000
Loans and debts	0	0	0	0
Total	17,019,607,013	0	0	17,019,607,013

The Company believes that the level of concentration risk related to debt repayment is low. The Company has the ability to settle its outstanding liabilities from operating cash flows and proceeds from maturing financial assets.

b. Market Risk: The Company's business activities are primarily exposed to risks arising from changes in prices, exchange rates, and interest rates.

- *Price Risk:* The Company is exposed to price risk of equity instruments arising from short-term and long-term investments due to the uncertainty of future stock prices. The long-term equity investments are held for strategic purposes, and at the end of the reporting period, the Company does not have plans to sell these investments.

- *Exchange Rate Risk:* The Company faces exchange rate risk because the fair value of future cash flows of a financial instrument will fluctuate with changes in exchange rates when the Company's borrowings, revenues, and expenses are denominated in currencies other than the Vietnamese Dong.

- *Interest rate risk:* The company is exposed to interest rate risk because the fair value of future cash flows of a financial instrument will fluctuate due to changes in market interest rates when the company incurs deposits with or without a term, as well as loans and debts subject to floating interest rates. The company manages interest rate risk by analyzing market competition to obtain favorable interest rates for its purposes.
